FOR SPORTS FIELDS

Nominee Herbicide can now be used to control wintergrass (*Poa annua*) in couch grass playing surfaces. With the label already permitting use in tall fescue and perennial ryegrass, Nominee is the “go-to” *Poa* product for sports field turf managers.

How does Nominee work?

Nominee is a selective Group B herbicide. Selectivity is achieved through differences in physiological responses to the herbicide by different species. Different species vary in how the herbicide is translocated through the plant and their ability to metabolise the herbicide.

How to use Nominee

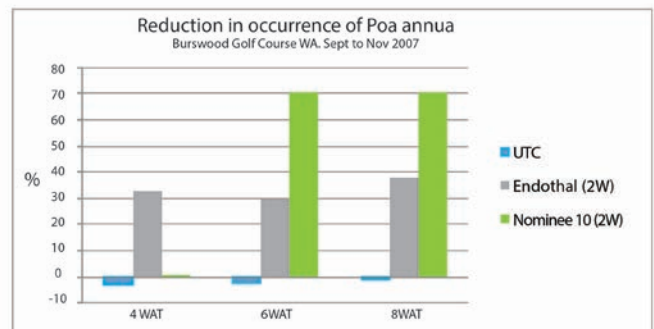

To ensure selectivity is maintained, Nominee needs to be applied to the sports field when the desired turf species is healthy, unstressed and actively growing – for couch grass this means in the warmer months.

Gradual transition is achieved by using Nominee in a program of multiple applications at regular intervals. Lower doses more frequently tends to deliver better results.

Key benefits of using Nominee

- Allows flexibility to remove *Poa annua* at your own pace to maintain cover and surface playability
- Used in a program of multiple applications, Nominee can gradually transition *Poa annua* from your desired turf species
- Results are predictable
- Greater control of *Poa annua* than endothal
- Can be used on a range of sports fields turf types (couch, perennial ryegrass and tall fescue)

Nominee delivered 2x greater reduction in Poa, compared to competition

Field trial conducted by Sports Turf Technology, WA

Nominee at a glance

Use	For control of <i>Poa annua</i>
Active Ingredient	Bispyribac-Sodium
Mode of Action	Group B (ALS Inhibitor)
Formulation	Suspension concentrate
Pack Size	500ml
Rate	250ml – 1.0L/ha (2.5 – 10ml/100m ²)
Application timing	Spring and summer
