

## FLUSHING

### REJUVENATE THE SOIL

*Some forces of nature are not always kind to your soil. Overcome the build-up of sodium, chlorides, and bicarbonates to increase the availability of key nutrients and restore proper air and water movement through your soil profile.*

#### REMOVE SODIUM AND CHLORIDES

**Calphlex's** layers of multi-cyclic chelates mobilize calcium to knock sodium off the soil profile.

#### PENETRATE

**Pervade** is a specially designed product for penetrating the soil profile and opening "pipelines" for water flow.

#### CALCIUM TO PUSH OUT SODIUM AND CHLORIDES

**Trical 35-SP** adds immediately available calcium to knock sodium off the soil profile. Use after flushing to restore plant available calcium.

*\*NOTE: See your Floratine distributor to evaluate alternative flushing needs based on your soil's calcium levels and drainage characteristics.*
