

MINIMIZING SPIKE DAMAGE

THE BEST DEFENSE IS A GOOD OFFENSE

Aggressive new spike designs are chewing up putting surfaces especially around the cup.

TURGIDITY

Turgor improves wear tolerance by increasing cell wall elasticity assisting in wear tolerance with a readily available form of silicon.

CELLULAR STRENGTH

TriCal 35-SP (35% Ca) increases cellular strength in cell walls by providing immediately available calcium.

WEAR RESISTANCE

Quad K (0-0-45) helps maintain high cell turgor pressure which aids in wear tolerance by providing immediately available potassium.
