

## MINING

### UNLOCK THE SOIL

*Almost all nutrients have an affinity for each other. Phosphorous is especially efficient in binding with calcium and micronutrients. Enhance the availability of nutrients by breaking the "tie that binds."*

#### UNLOCK

**Calphlex** provides layers of multi-cyclic chelates for mobilizing calcium, iron, magnesium, manganese, and zinc.

#### RELEASE

**Maxiplex's** humic acid molecules migrate between soil colloids where they release potassium, phosphorous, and iron.

#### OPEN

**Pervade** is a specially designed product for penetrating the soil profile and opening "pipelines" for water flow.
