

## ORGANIC MATTER / THATCH REDUCTION

### ALLOW THE SOIL TO BREATHE

*Turf needs air and water, but thatch build-up minimizes the availability of both. Break down the thatch to release nutrients and increase the movement of air and water.*

#### REDUCE THATCH

**OMG!!!** is a concentrated cellulase enzyme that duplicates those in nature, breaking down the major component of dead plant tissue.

#### PENETRATE THATCH

**Pervade** is a specially designed wetting agent for penetrating tough thatch layers.
