

At Turfcare Australia, we understand that maintaining vibrant and healthy turf requires a combination of expertise, dedication and the right fertilisers. That's why we're proud to present our range of premium liquid products - a lineup designed to meet all your turf care needs with unparalleled reliability.

The Turfcare Premium Liquids range (TPL) have been meticulously crafted through extensive research, trials, and product development efforts, with a specific focus on catering to the Australian market. These liquid nutrition products have been expertly formulated to provide exceptional results across a wide range of applications while ensuring ease of use, safety on all turf surfaces, and compatibility with various liquid technologies.

TPL's commitment to excellence is reflected in the selection of high-quality ingredients and precise analyses, which enable the management of turf health at the highest standard while maintaining affordability. Produced in Australia under stringent quality control measures, the TPL range establishes itself as a dependable and quality-driven partner for all Turf Managers.

TPL Auxin Plus ++: A specialised blend of root hormone stimulants, including two types of auxins (IAA/NAA), and a rich concentration of Vitamin B1. This formula is designed to enhance root growth and promote the development of new root tips in various applications, such as turf and propagation. Additionally, the auxins in TPL Auxin Plus++ facilitate early leaf formation, contributing to overall plant vitality and growth.

TPL Bolster 0-0-8: Specially formulated to fortify and maintain robust, resilient turf. This unique blend of potassium and silicon fosters vigorous, upright growth while enhancing resistance to pathogens. TPL Bolster increases silicon accumulation in epidermal cells and cell walls, leading to more upright leaf blades and a thicker, durable cuticle layer. This stronger cuticle reduces water loss and minimizes non-stomatic transpiration. Strengthening the cuticle prior to drought conditions can slow transpiration and potentially deter fungal attacks by bolstering cell wall thickness. Furthermore, TPL Bolster activates the plant's innate defense mechanisms against pathogens. For optimal results, apply TPL Bolster to all grass types before stress conditions set in.

TPL Combo 11-0-0: A high-quality solution designed to swiftly reduce soil sodium levels. With a balanced 4:1 ratio of calcium to magnesium and a chloride and sulfate-free composition, it's perfect for routine maintenance. It can be seamlessly injected into fertigation systems, allowing for adjustable nitrogen output rates. TPL Combo's free-flowing formulation simplifies the transfer to spray equipment and mixing tanks, saving time and effort. Additionally, it's enriched with boron to enhance calcium uptake in plants, fostering healthy growth and development.

TPL Entire + AA 18-0-12: A new unique, balanced Nitrogen/Potassium turf fertiliser. 50% of the Nitrogen is formulated with new generation technology to maximise foliar uptake. The Potassium component of TPL Entire is in the form of carbonate providing rapid availability of K to the plant. The formulation also contains Iron for enhanced green up and fertiliser response and Amino Acids to aid in uptake and assimilation within the plant. These attributes provide you with a stable, reliable and cost effective platform from which to build an efficient turf maintenance program.

TPL Essence 14-3-5: A balanced, high N:K ratio liquid nutritional supplement with added essential trace elements suited for use on all turf surfaces as a maintenance fertiliser and to aid in rapid growth and turfgrass recovery. TPL Essence provides all the essential plant nutrients for healthy turf growth in all seasons and at a wide range of soil pH in a convenient and easy to use form.

TPL Hi-K +AA 10-0-20: A high Potassium liquid fertiliser for immediate and sustained plant growth. TPL Hi-K +AA is a low burn formulation made with premium ingredients containing 10% Nitrogen, 60% of which is slow release Urea Technology and 20% Potassium Carbonate. Combined with an Amino Acid package for additional plant health response and 0.5% chelated Iron for enhanced green up, this product provides a solid base on which to build a sustainable soil nutrition program providing maximum benefits.

TPL Standout 15-0-0: Combines the synergistic effects of iron and 2% manganese with nitrogen to produce turf with a dark, emerald green colour perfect for presenting a turf area that stands out for special events or high profile occasions. Iron and manganese are complexed with citrates to enhance foliar uptake and avoid nutrient tie ups in the soil and in the spray tank.

TPL Standout Low N 5-0-0: Combines the synergistic effects of iron and 4% manganese with SRN nitrogen to produce turf with a dark, emerald green colour perfect for presenting a turf area that stands out for special events or high profile occasions. Iron and manganese are complexed with citrates to enhance foliar uptake and avoid nutrient tie ups in the soil and in the spray tank.

TPL Strength PK+ 0-22-32: A highly concentrated phosphorus and potassium liquid fertiliser. This product contains phosphorus salts, di-potassium salts, mono-and. TPL Strength PK+ fertiliser can be applied to the foliage or root zone, and it will correct P + K deficiencies within the turfgrass, whilst also improving the health, growth, vigour, and strength. With the additional vitamins and amino acids TPL Strength PK+ will provide a great environment for root development within the soil profile.

TPL Ultikelp +AA 0-2-8: Contains a powerful concentration of kelp for the promotion of root and shoot development. This highly concentrated liquid KELP contains 35% w/v Kelp which provides a combination of auxins, cytokinins, gibberellic acid and alginic acid to stimulate root and shoot growth. Naturally contains phosphorus and potassium to effectively supplement plant nutrition levels.

TPL Zenith 0-0-1: Increases CEC levels in all soil types, which aids in accelerating nutrient availability, uptake, and retention, promoting healthy growth and development. Also aids in reducing 'black layer' in turf which can cause significant damage to plant health. Our product is designed to increase root depth and density of the root mass throughout the soil profile, leading to healthier and stronger plants. TPL Zenith also enhances plant health and may improve disease resistance.

Why Choose Turfcare Australia?

Expertise: Backed by years of experience, we've meticulously crafted each product to address the unique demands of various turf environments.

Sustainable Approach: Reduce the frequency of applications and minimise nutrient runoff, all while maintaining impeccable turf health.

Tailored Solutions: Our diverse range caters to different seasons, maintenance levels, and turf types, giving you the flexibility to choose the best fit for your requirements.

Unveil the Full Potential of Your Turf Today:

Discover how Turfcare Australia's premium granular products can transform your turf into a masterpiece of strength and vitality. Whether you're a professional landscaper, golf course, race track or sports ground manager, our range offers the reliability and results you deserve.

Contact us today to explore the possibilities and elevate your turf care to a whole new level. With Turfcare Australia, your turf's health is in capable hands.
