

WINTER PROTECTION

CARB LOADING FOR THE MONTHS AHEAD

Winter Protection is necessary to get through the harsh realities of cold temperatures causing slow growth and dormancy. Floratine's Winter Protection Plan builds and stores carbohydrate reserves for continued strength until spring arrives.

CARB LOADING

Glycofuze provides needed glycomic sugars after a long growing season to prepare low cut turf with sufficient carbohydrates to ensure there is an adequate food source during the winter months.

SUSTAINED GROWTH

Protesyn conserves energy and converts excess nitrogen by supplementing photosynthetic processes with a balanced blend of amino acids, carbohydrates, enzymes, and vitamins.

STRENGTH & ENERGY

Fights On is a one-two punch to prevent stressed-out turf and offers more than a fighting chance. With a heavyweight dose of 3.6% silicon for cell strength, stress and wear tolerance along with a proprietary stabilised phosphite for a boost of energy.
